DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 5, dependent on claim 1, repeats the same limitation as claim 1. "said shield comprises low friction polymer", claim 5, is the same limitation as "comprising the inclusion of a low friction polymer shield", claim 1.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1, 5, 6 and 11 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Krosunger 4,334,356. '356 teaches providing a skid plate of a sawing tool with a low friction polymer shield (Plexiglas). Please refer to column 3, lines 60-65. It is inherent that Plexiglas is a low friction polymer. Please refer to Szentkuti, 3,511,494, column 7, lines 6-10, which states that Plexiglas is a low friction, stiff plastic

material. Further, note that a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 370 F.2d 576, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 312 F.2d 937, 939, 136 USPQ 458, 459 (CCPA 1963). Here, the intended use is a concrete saw cutting system. The prior art to '356 is capable of performing the intended use.

5. Claims 1, 5, 6, and 11 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Schroer et al, US006736126B2. Please refer to figures 19 and 20 and column 6, lines 18-34.

Allowable Subject Matter

6. Claims 2-4, 7-10 and 12-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record does not disclose or fairly teach a skid or support plate overlay or shield where there is a spacing between the plate and shield. For example, '126 discloses that the shield is mounted directly to the skid plate. '356 also discloses the shield directly mounted to the skid plate. One of ordinary skill would have found it

novel and unobvious to have provided spacing between the shield and plate, absent applicant's teachings.
